EXECUTIVE SUMMARY

Welcome to DELTA7, a virtual world on metaverse that allows gaming and earning. It utilizes the Deficonnect block chain using DFC as the platform token. On DELTA7 players can build, own and of course monetize their experience as they play games.

The DELTA7 project is a revolutionary one that will bring about an entire different and unique experience for players in the field of gaming and DeFi. The games are designed with a highly acceptable mechanism for players to be entertained, while DeFi will bring income and sustainable ways to make money for users as long as they keep gaming offering a deep captivating metaverse that allows creation of virtual games that are independent on their own without the control of any central authority.

With DELTA7 players will have right to their non-fungible tokens (NFTs) displacing contemporary game makers like Terraria, Minecraft, Lego Worlds etc. Thereby rewarding their participation with our utility token-DFC. In the contemporary game market, there is limitation to ownership of user created or generated contents restricting users from generating an income or financial reward for their creations.

Now, we have put together a more standard technique via DELTA7 which will bring you the most novelistic and not fabulist but familiar gaming episode under NFTs mechanism fascinating gameplay that every player can easily adapt to while still receiving valuable rewards in terms of earning real money.

AUTHOR: SOPHIA OGHENE

We are aiming to take the lead in the mass adoption of block chain applications in the gaming industry by building a voxel gaming platform where DeFi and game interested individuals are able to play, share, collect, and trade without central control, enjoying secure copyright ownership with the ability to earn crypto currency (DFC). This crypto currency reward system will be established and guaranteed through the use of NFTs, making sure every in-game item will have a unique and unchangeable rigid block chain identifier.

The amount of time being spent on the virtual world for both leisure and work purposes has increased drastically. This occurrence is more predominant in 2D interfaces such as the web and mobile phones but a traversable 3D world adds a deep component as well as adjacency to other content, creating physical clusters of communities.

Unlike other virtual worlds and social networks, DELTA7 is very unique drawing up inspiration from ancient Africa combining its stories with the leading NFT and DeFi technologies in the block chain, by introducing designers in the field, making full use of the "interoperability" advantage of block chain technology, allowing NFTs in the virtual world to become toy figures in the virtual world with in the DELTA7 entertainment metaverse, breaking the dimensional barriers and not controlled by a centralized organization.

There is no single agent with the power to modify the rules of the software, economics of the currency, or prevent others from accessing the world as we boast of creating a world-class pan-entertainment platform based on block chain technology.

To join the game, users can download the game on Android & IOS applications or use the web version and register to play the game.

PROJECT OVERVIEW

BLOCK CHAIN GAMING WITH NFTS

The DELTA7 virtual world utilizes block chain technology and NFTs to empower the players. NFTs are fast rising aspects in the global game market: virtual tokens for digital scarcity, security and uniqueness. Every NFT is distinct or authentic, it is indivisible and it is not interchangeable for another.

COMPARISON OF FUNGIBLE VERSUS NON-FUNGIBLE TOKENS

Fungible vs. nonfungible tokens

	Fungible tokens	**Nonfungible tokens**
Main features	Divisible	Indivisible
	Non-unique	Unique
	Interchangeable	Irreplaceable
Real-world purposes	Payment system	Intellectual property
	Store of value	Academic title
		Artwork
		Music composition
		Gaming
		Utility
		Assets like stocks, shares
		Access to a service i.e., a subscription
Technology used	Own blockchain	Built on another blockchain
Example of tokens	Bitcoin; Litecoin; ERC-20	ERC-721
Content stored	Value	Data

BENEFITS

This creation of a decentralized block chain based gaming platform provides multiple benefits which makes us unique when compared to contemporary, non-block chain systems. Through the use of Non-fungible tokens, users of DELTA7 will be able to benefit from:

- **Actual digital ownership:** Players have ownership right of in game items purchased by them. So. If the game is shutdown they don't lose those in game items rather they decide whether to sell, trade or gift this item because with block chain technology every game item can be tokenized.

- **Security and immutability:** Digital game items can be easily traded for money in primary and secondary markets platforms that are managed and facilitated by block chain technology. Most times due to scarcity and demand fraudulent act and theft is inevitable but with block chain technology which our gaming platform employs such risks can be drastically reduced to the barest minimum because it is a distributed ledger.

- **Decentralized trading:** Users have ultimate control over their digital assets. They can buy and sell items freely without fear of being ripped off or that a platform will close and cancel all the value of their in-game items.

- **No complete loss:** In other contemporary gaming platforms and even some block chain gaming platforms, once a game is shut down all in game items are lost but with DELTA7 you decide what to do with in game items.

WHAT IS DFC AND WHAT IS IT USED FOR WITH RELATION TO DELTA7?

DFC is a major constituent of the DELTA7 platform. DELTA7 is working towards making it a core part of the platform with its value tied to the platform's utilization through key mechanics being established. It will be used across the ecosystem by players to exchange assets building a user-based platform of rewards while developing an ecosystem where players will share various truly unique gaming experiences. User generated digital assets are represented as DFC tokens.

To ensure the everlasting scarcity and verifiable scarcity of non-fungible items, the DFC token standard is employed. This standard allows a smart contract to track token-ownership at the individual token level: each item has a unique identifier and, optionally, unique properties stored. DFC is a utility token built on the Deficonnect block chain that serves as the basis for transactions within the DELTA7 platform, and has the following uses:

- **Access the DELTA platform:** Players spend DFC in order to play games, share, collect, and trade. They stand a chance of being rewarded also in DFC which is a fast rising token through gameplay. Playing games and trading drives demand for DFC for staking purposes. Players spend and earn DFC to access the marketplace and buy gems and other necessary gaming attributes.

- **Foundation:** The role of every foundation is to support the ecosystem and the DELTA7 is not failing in this aspect, offering grants to incentivize high quality content on the platform. It may interest you to know that the foundation has unique game projects only existing on its metaverse producing NFTs ahead of the public launch. The overall valuation of the metaverse grows through the valuation of all games developed by the foundation, creating a virtuous circle to enable the DELTA7 creation or more bigger and better games.

- **Staking:** DELTA7 is open to staking allowing users earn passive revenues on DFC, you get more DFC by staking it. This is also a very strategic way to get valuable gems and other important attributes necessary for gaming.

- **Fees:** Payment to play game and to buy in-game items and all other transaction on the DELTA7 gaming platform is carried out in DFC tokens.

DFC can be acquired by players through multiple ways as described below:

- **Playing:** Players will be able to earn DFC tokens while playing the different games uploaded to the DELTA7 ecosystem. They might win DFC by slaying a legendary monster, opening a chest, or even completing a quest; nearly endless possibilities can be created in games.
- **In-Game Purchases:** Experienced players will be able to set up many different monetization systems by playing well and buying in game items to earn DFC. These monetization techniques range from item purchases to start boosters, subscriptions, or even entry fees to the game itself.

FUTURE TECHNOLOGY INTEGRATIONS

Why are we using Deficonnect?

- **Ease:** Deficonnect has been built with flexibility in mind, which perfectly fits our use case with Asset tokens. Deficonnect also has the largest number of developers, which allows for well-established standards, best practices and support
- **Strength**: It is, as of today, among the most robust block chain with fast rising wide adoption making the network validated by many and thus more secure.

Deficonnect is a block chain that has been proven by thousands of dApps and developers for its robustness and offering a large ecosystem, resources and support from developers. With the current system we are building we can offer a great experience on Deficonnect for non-crypto users.

DELTA7 IS THE COMBINATION OF GAME PAD + NFT YIELD FARMING + GAMEFI PLAY TO EARN.

- **Game Pad:** DELTA7 Game Pad promotes game incubation and distribution, building an entertainment meta-universe with various games, and also creating a new block chain game that aids finances.

- **NFT Yield Farming:** The value of NFT characters increases as more people or players invest into it over time thereby bringing about the possibility of the innovative concept of NFT Yield Farming by making it accessible to those who can afford the DFC value associated with the NFTs, this causes an exceptional enhancement for NFT collection value!

- **GameFi Play to Earn:** Focusing on the NFT gaming metaverse, DELTA7 is targeting a creation of a more pleasurable new financial system that is block chain integrated and gaming, making the application entertaining and investable.

GAME OVERVIEW

From the ancient African culture combining characters from stories we have leading NFTs ranging from popular to epic, epic to rare and rare to unique. In the DELTA 7 entertainment metaverse, players can use the perfect tools provided by DFC to access the system in built NFTs derived from diverse cultural masquerade now renamed into more sophisticated and much more comprehensive characters like Headbony, Jungle bells, Medaline, Blackville including other existing NFTs creation. This platform allows playing games with this characters, and inviting friends to do same thereby building a strong community for your team. The powerful game ecology in the DELTA7 entertainment metaverse will also empower NFT.

- **DELTA7 Token:** $DFC Token is the crucial token of GameFi, which can be exchanged.

- **DELTA7 Shop (Market):** Buy in game items to increase the earnings from the GameFi.

- **DELTA7 App:** Where gamers can play with others and get reward.

- **DELTA7 NFT:** You can earn this free NFTs that can be traded immediately for quick cash the more you play.

MARKET OVERVIEW

The current gaming due to its lack of constant improvement has unknowingly offered DELTA7 a unique opportunity to exploit on both PC/Mac and mobile platforms, as the opportunity to shift power and earning potential into the hands of players in the growing gaming market will add significant value to their gameplay experience.

- The world gaming market by 2025 should reach an estimated USD 171.96 billion.

- The mobile segment, which is one of the DELTA7 target platforms will gain a targeted momentum and result to a compounded annual growth rate (CAGR) of 7.3% over the coming years, owing to increasing smartphone penetration across the globe.

- The online segment will most likely witness substantial growth over the next years, expanding at a CAGR of 8.6% from 2020 to 2025. This estimated growth can be attributed to increasing broadband penetration and growing online social network gaming.

- The Asia Pacific market is expected to gain a lot of increase, spiking the market size to an estimated USD 86.84 billion by 2025. Emerging countries such as China, India and South Korea are doing so well by offering very good growth opportunities for market augmentation, the penetration of smartphones and internet in these countries can be seen as part of the reasons for this growth.

PLAYER MARKET

Here, there are no ownership or compensation related issues as players are of less concern because they primarily come to play games and buy items rather than create and sell them and this is also because the DELTA7 platform do not offer such services right now but should in the near future. However, they spend real-world money in DFC to buy items in-game, and they earn this money as they win unlike other block chain gaming platforms where players would invest in buying in game items and not recover their real world money. For instance, if they stop playing a game, all the items they bought in it immediately become worthless. If the game is shut down for any reason, such as a decline in popularity that makes it less profitable, all the player's in-game purchases vanish into nothing. This is especially true in free-to-play (F2P) games. Purchases are a one-way street. Players spend money to buy things in the game, but have no way to recover their value if they no longer use an item, and have no way to sell it to another player legally so they receive no compensation if the game is taken off the market.

MARKET SOLUTION

The game's player-centric innovations and improvements over current titles in the market make it possible that the DELTA7 can expand its audience beyond the 50,000,000 players who have downloaded previous contemporary. The first stage of this process is the improvement DELTA7 a decentralized gaming community with elemental factors that ensures freedom to ownership of in game items, decentralized trading, no complete loss, security and immutability.

TOKENOMICS/ REVENUE STREAM

$DFC token represents the common currency of the DELTA7 gaming metaverse. It has a very strong support system built on block chain and they include Binance Smart Chain, CoinGecko and Latoken. It utilizes a very unique system that aids the burning of tokens affecting its total supply by reducing it and this ensures fairness in the circulation and distribution of the $DFC token.

DELTA7 has numerous revenue streams and they include:

- Company NFTs Sales

- Player Subscriptions

- Transaction Fees: NFT transactions e.g., entrance fees for game experiences and player subscription fees.

- Advertising Revenue

SECURITY

The DELTA7 marketplace is based on the security of Block chain technology for the functioning of its smart contract. We spend a lot of time looking at how to preserve security and integrity for assets on the block chain while still allowing the speed and flexibility that players and creators demand. The DELTA7, users will have full control over their assets, by being able to buy, sell, and trade those same assets in the DELTA7 marketplace using our DFC token currency.

CONCLUSION

The DELTA7 is a decentralized platform that gives players access to play games at their leisure and own in game items on their metaverse that of course can be traded, gifted, and sold for instant monetary rewards depending on what they decide to do with the items. All this benefit and enjoyment from a simple playing time.

In the coming year, our experienced and dedicated team will build a more unique way to play in a virtual world where you can play, create, collect, earn and own items in the game.
